A sample of 200 adolescent girls was selected from different government schools of district Srinagar in order to arrive at dependable conclusion. A structured interview schedule was prepared and simple language was used but still in some schools questions had to be explained in local Kashmiri language to obtain appropriate information from the respondents. The study reveals that:1.While analyzing the heights (cm) for adolescent girls both in normal and anaemic group it was found that there is statistically significant difference between the adolescent girls of particular age group...
