Excerpt from A Study of the Tumors of the Bladder: With Original Contributions and Drawings Four cases of tumor of the bladder have come under my observation within a few years. Two of these were followed to their fatal termination. Both were instances of primary cancer; in one case the tumor was an encephaloid, in the other it was a villous epithelioma. Autopsies were fortunately obtained in both cases, the specimens were preserved and carefully examined microscopically by Carl Heitzmann, M.D, to whom also I am indebted for the drawings which accompany the histories of the cases herein recorded. The other two cases, both male, were only temporarily under observation; in one, the diagnosis was clearly made by physical examination and then the patient disappeared; in the other, the tumor was not made out by the touch, but the frequent micturition, blood-tinged urine, extreme tenderness of a certain portion of the bladder to the contact of instruments, together with the occasional escape with the urine of flocculent fleshy particles, left little doubt as to the existence of a vesical growth. With this personal experience I began an inquiry as to the exact status of the literature upon tumors of the bladder.
